

10-8

CURTAIN MINDER

Reduce the gamble with the loss of power ventilation and give yourself peace of mind. Let the "10-8" Curtain-Minder monitor the power and temperature in your confinement rearing buildings. The Curtain-Minder releases curtains and winches to provide emergency natural ventilation when there's a problem. Save the costly lives of your production animals.

- * A red indicator lights up on the front when low AC power has been detected. Low AC power will release curtains and winches the same as no AC power.
- * A yellow indicator lights up under the terminal block if the Electro-Holds are wired incorrectly.
- * The Curtain-Minder box can be conveniently located near the breaker panel. The Winch Kits are remote.
- * Two types of winch kits are available. One is the Universal model. The Universal model can be installed either Extra Strength, or Direct Connect. The second method is the Tunnel version. When in Tunnel, if one curtain releases, they all are released to provide improved safety.
- * Four Winch Kits can be used on each Curtain-Minder with full strength. A fifth or sixth Winch Kit will operate with some progressive loss of strength.
- * An optional Reed switch can activate an alarm system when the curtains are released.

Benefits to You...

***So simple to understand
Virtually FAIL-SAFE release***

***User Friendly
Durable***

Easy to Test

***Safe
It will "KEEP 'EM COZY"®***

- * The Winch Kit uses an efficient Electro-Magnet for holding the curtains and winches.
- * If any system component or wiring becomes faulty, the Curtain-Minder releases the curtains. It will also open gravity or weight operated ventilation panels and doors.
- * No waiting or warm-up. The CM 2000 has no knobs or switches.
- * The CM 2000 is made to last and there are no batteries to maintain. Lightning protection is built in. The Winch Kits are capable of holding and releasing from 1 to 50 pounds of weight.
- * Fully power outage tested and restored in about one minute. No warm-up period is required; it's instantly ready to detect power outages and BROWN-OUTS.
- * Uses 24 Volt UL listed transformer so there is no high voltage outside the transformer. All the parts and wiring is safe.
- * The Curtain-Minder reduces the growers concern about heat prostration and suffocation
