

# LIGHT-SPIKER™

## FOR Pro-Tech Light Dimmers

The LIGHT-SPIKER provides the 'Spike Light Management' period to stimulate birds to eat and drink, then 'Dim Light Management' period to make them lazy so they can grow more efficiently. The 'Spike Light Management' (SLM) period is controlled by the SPIKE TIME knob. The 'Dim Light Management' (DLM) period is controlled by the DIMMER TIME knob.

• The LIGHT-SPIKER adds another dimmer control knob and two timers to the Pro-Tech dimmers. The LIGHT-SPIKER provides an intermittent higher level of light to encourage the birds to eat feed and drink water. The lower level of light encourages the birds to rest and grow.

• The first timer knob sets the frequency of the spiked light. Of course, this sets the DLM in which the dimmer knob controls the bulbs.

• The second timer knob sets the duration of the spiked light. This sets the SLM in which the spike knob controls the bulb intensity.

• Turn both timer knobs to zero to make the dimmer have full control with its knob.

The LIGHT-SPIKER is an inexpensive way to add increased performance to your poultry rearing facility. The LIGHT-SPIKER only lists for \$198.00. It is designed with a computer chip, which switches the control from the dimmer knob to the Spiker knob. The computerized LIGHT-SPIKER clock controls both the DLM and the SLM periods.
